

Fayzulla Yoldashev

Web developer

Experienced Web Developer | Android App Developer | Telegram Bot Developer

I am a passionate web developer with a strong track record in creating dynamic, user-friendly websites, Android apps, and Telegram bots. Proficient in HTML, CSS, PHP, and Python, I have a solid understanding of web development principles and experience working with REST APIs. I also possess foundational knowledge of JavaScript, Java, Dart, and C++.

I have successfully developed and delivered websites and systems related to SRM (Supplier Relationship Management) for various companies on a freelance basis, demonstrating my ability to meet client needs and solve real-world problems.

Projects

1. CRM System for Educational Institutions

Role: Developer | Technologies: [List Technologies]

Developed a CRM system for educational management, featuring personalized dashboards for students and teachers, and an admin panel for full control. Key features include:

Student & Teacher Dashboards: Track test results, activities, and payments.

Teacher Payment Management: Monitor and manage teacher payments based on performance.

Admin Control: Full oversight of users, financials, and reports. 2. Educational CRM Solution

Role: Full Stack Developer | Technologies: [List Technologies]

Created an educational CRM system that integrates student data, teacher payments, and financial tracking:

Student & Teacher Profiles: Access to performance, progress, and payment history.

Payment & Activity Tracking: Admin tools to track and manage finances and performance.

Reporting: Real-time analytics on student and teacher metrics.

3. Educational CRM Management System

Role: Software Developer | Technologies: [List Technologies]

Designed a CRM system for educational institutions to manage student data, teacher payments, and administrative tasks. Features include:

Student Data: Track test scores, payments, and activities.

Teacher Payments: Monitor teacher pay based on performance and engagement.

Admin Controls: Full admin access to users, income, and reports

.4. Integrated CRM for Educational Institutions

Role: Software Engineer | Technologies: [List Technologies]

Developed an integrated CRM to streamline educational operations:

Student & Teacher Tracking: Manage user activity, payments, and performance.

Admin Dashboard: Oversight of all users, finances, and system operations.

Reports & Analytics: Generate real-time financial and activity reports

5. CRM System for Educational Operations

Role: Developer | Technologies: [List Technologies]

Built a CRM system for managing student and faculty data with features for tracking payments and performance:

User Profiles: Personalized views for students, teachers, and admins.

Payment Management: Track and manage teacher payments and student fees.

Admin Oversight: Manage users, financial data, and generate reports

5. CRM System for Educational Operations

Role: Developer | Technologies: [List Technologies]

Built a CRM system for managing student and faculty data with features for tracking payments and performance:

User Profiles: Personalized views for students, teachers, and admins.

Payment Management: Track and manage teacher payments and student fees.

Admin Oversight: Manage users, financial data, and generate reports
